

NAME

server – receive and process transactions from clients

SYNOPSIS

server *port*

DESCRIPTION

server receives the transactions from clients on specified *port*. Then the server processes them, and waits for the next transaction. Server will time out and exit after 30 seconds of no incoming messages. *port* is the port number that the server listens to for communications from clients. The port must be in the range 5,000 to 64,000.

EXAMPLES

server 5002 start a server and build socket on port 5002
